

Subject: Design Technology

Lead Teacher: R Williams

Year: 9

Curriculum organisation

Students are taught in mixed groups of **24** for **two** hours per week. They are not grouped by ability.

Overview of Topics & Key Information

How will your child be learning?

| Term | Unit(s) of Work | Key Enquiry Questions | Key Content/ Terminology | Skills developed | How will your child be learning? |
|-------------|---|---|--|--|---|
| Autumn Term | Jewellery Project – themes (Travel/cultures/fashion/science/mathematics/nature) Unit 5D- Polymer Theory (taught alongside Jewellery Project) | <ul style="list-style-type: none"> • How do trends and culture impact design? • Why does choice of material impact design? • Where do polymers come from? • What are the ethical choices that are made in the production of plastics products | <ul style="list-style-type: none"> • The Design Process • Research • CAD (2d Design) • Modelling/testing (Polymer Clay) • Modelling/testing (Laser outcome) • Branding/advertising (graphic design elements) • Plastic sources and origins • Polymers and properties (Thermoforming/Thermosetting) | <ul style="list-style-type: none"> • How to use the work of others to inspire designs. • Successfully communicate different design proposals. • Understand the different sources of polymers | <ul style="list-style-type: none"> • Whole class discussion • Pair work • Practical activities • Problem-solving tasks • Watching short video clips • Research tasks • Individual focus Practical Tasks and activities (building blocks) • Investigation and Research activities. |
| Spring Term | Unit 6- Designing principles- Graphical communication Unit 5D- Commercial manufacturing | <ul style="list-style-type: none"> • How can polymers be manufactured? • Why are different polymers appropriate for different commercial applications? • What quality control measures are used in manufacturing? | <ul style="list-style-type: none"> • Isometric • 1 point perspective • 2 point perspective • Orthographic projection • Injection Moulding • Extrusion • Blow Moulding • Plastic surface Treatments and Finishes • Quality Control | <ul style="list-style-type: none"> • Graphic communication. • Engineering design techniques. • Accurate planning of a project. • Be able to identify the different types of manufacturing. | <ul style="list-style-type: none"> • Demonstration activities • Health and Safety discussions • Use of whole school Rosenshines principles of instruction-strategies for student autonomy with student led projects and design work, effective and meaningful feedback to increase progress. |
| Summer Term | Structural adventure playgrounds design project Commercial design and planning techniques Unit 7- making principles | <ul style="list-style-type: none"> • What factors can impact a design? • How can we use the iterative design process? • Why is modelling important? • How can we present our outcomes? | <ul style="list-style-type: none"> • Theory – Forces and structures • Research – Product analysis • Design/development of outcomes • Modelling techniques • Testing • End testing and evaluation techniques. | <ul style="list-style-type: none"> • Investigation into parallel products. • Communication of ideas. • Sketch modelling. • Selecting and evaluating materials based on key qualities. | <ul style="list-style-type: none"> • Use of whole school Rosenshines principles of instruction-strategies for student autonomy with student led projects and design work, effective and meaningful feedback to increase progress. |

| Equipment needed for lessons | How will learning and progress be assessed? |
|--|---|
| <ul style="list-style-type: none"> • Standard school stationery • Exercise book • Calculator • Colouring pencils | <ul style="list-style-type: none"> • End of unit tests (subject knowledge focus) • Formal assessment week (May) • Peer and self assessment • Homework tasks (often research or project based) • Retrieval practice activities • Tutorials small group or one to ones. • Questioning (What, Why, How) and recall of information • Examination question responses |
| Extension & Enrichment opportunities | What can you do to support your child? |
| <ul style="list-style-type: none"> • Arkwright Scholarship Trust Application support to appropriate students • Communication of Small Piece Trust short courses • Communication of local/National Competitions • STEM workshop activities • Opportunity to lead a club for the lower years | <ul style="list-style-type: none"> • Utilise student 'in' and 'out' and Teams folders for additional support materials set up by your teacher • http://www.technologystudent.com/ for supportive revision tasks and flash cards • Animations of manufacturing processes accessed online can be supportive in gaining a clear understanding in each material area, this is encouraged from year 9 • How's it made (selection of videos to support visual learning) • AQA GCSE (9-1) Design and Technology Text book • Parental support is always helpful, taking an active interest in design briefs, students work and time management of independent non-exam assessment. |
| Inclusion | Inclusion within Design Technology |
| <ul style="list-style-type: none"> • Teachers follow student passports to ensure that the needs of all students with SEND are met. • Work is enlarged to the necessary size for visually impaired students. • Teachers will ensure that classrooms are quiet learning environments where possible and will dim lights to support students with sensory needs. • Students have the use of laptop if they have a SEND need whereby use of a laptop supports them. • Hearing impaired students are supported through use a radio aid and teachers ensure that students can lip read at all times during lessons. • Dyslexic students are encouraged to use coloured overlays when they are required to read long passages. • Use of dyslexic friendly fonts and coloured backgrounds used in PowerPoints/resources. • Students with ADHD are given movement breaks, fidget toys and lessons are 'chunked' to aid concentration. • Students are seated according to their needs, students work with the SENDCo to decide upon this. | <ul style="list-style-type: none"> • Within projects students learn about a range of designers with a full range of backgrounds. • Students are supported practically by the teacher or TA if a student requires this. • Equipment I adapted where necessary to accommodate the needs of the students with SEND. • Where necessary students are given frequent one to one tutorials and demonstrations to revisit previous techniques and processes taught to support their understanding. • Students are encouraged during designing to think about their own experiences and how these interact with the material/ project they encounter. • Dyslexic students are provided with knowledge organisers for each topic in order to have reference to key terminology and definitions. • Use of visual and audio cues to support processing of written text. • Keywords/ subject specific vocabulary displayed on walls to aid memory. • All teachers employ inclusive pedagogy so not just what they teach but how they teach is inclusive through a variety of delivery techniques (step-by step guides, mindmaps, multiple choice questions, placemats/ written task instructions) and assessment design which contributes to the achievement of all pupils (use of model examples, scaffolder responses) |

If you have any questions about this Learning Overview, please contact the named Teacher above.
